## **Cleaning Guide**

**English**

## Cleaning & Sanitization

The standard industry method for cleaning electronic equipment is to use a clean microfiber cloth with a mix of 70% (v/v) isopropyl alcohol and 30% water. Customers should ensure the device to be cleaned is switched off and all cables removed before using the cloth, damp with the alcohol solution, to gently wipe down all surfaces starting with the display and finally cables. All surfaces must be completely dry before switching the device back on. Liquids should not be sprayed directly onto the device, and moisture should be prevented from entering ports or dripping into the keyboard.

## Results & Conclusions

Active Ingredients	Example	N14+	N14	N15b	Tab K11
Isopropyl Alcohol 70%	Alcohol Prep Pads/Swabs	✓	✓	✓	✓
Ethyl Alcohol 75%	Ethanol Sanitizer	✓	✓	✓	✓
Isopropanol 17.2% & Ammonium Chloride 0.28%	CaviWipes™	✓	✓	✓	✓
Sodium Hypochlorite 0.55%	Clorox Healthcare® Bleach Germicidal Wipes	✓	✓	✓	✓
Ammonium Chlorides 0.25%	Sani-Cloth® Plus Germicidal Disposal Cloth	✓	✓	✓	✓
Ammonium Chlorides 0.21%	Total Solutions™ Disinfectant Wipes	✓	✓	✓	✓

Disinfecting Pokini rugged mobile devices in line with the above guidance will ensure they remain fully operational and safe for use. In order to test that devices would hold up to the sanitization procedure across their lifetime, it was completed 10,000 times at a pressure of 1kg/cm<sup>2</sup>.
